

Website Build Prompt

A ready-to-use prompt for coding a modern, high-trust agency/business website — inspired by the UI/UX analysis of weevolveit.com

Copy everything below into an AI coding assistant (e.g. Claude Code, Cursor, v0, Lovable) or hand it to a developer as a build brief. Replace bracketed placeholders [LIKE THIS] with your own business details.

1. Project Overview

Build a modern, dark-themed, single-page-feeling marketing website for [YOUR COMPANY NAME], a [YOUR INDUSTRY / SERVICE] business. The site should feel premium, fast, trustworthy, and conversion-focused — using bold short copy, strong social proof, a clear step-by-step process section, and low-friction contact options (email + WhatsApp/chat).

Tech stack:

- Framework: Next.js (React) with TypeScript
- Styling: Tailwind CSS
- Animation: Framer Motion (scroll-triggered reveals, counters, marquees)
- Fonts: one clean sans-serif for body, one bold display font for headlines (via Google Fonts)
- Hosting target: Vercel
- Forms/contact: mailto link + WhatsApp deep link (wa.me) as primary CTAs

2. Design System

Color Palette

- Background: near-black (#171717 / #0F0F0F)
- Text: off-white (#F5F5F5) for headings, light gray (#B3B3B3) for body copy
- Accent: one signature color used sparingly for links, highlights, and progress indicators
- Card/section backgrounds: subtle dark gray (#1E1E1E) to separate sections without hard borders

Typography

- Large, bold, tight-tracking headlines (48–72px on desktop, scaling down on mobile)
- Short line lengths for hero and section intros (max ~60 characters per line)
- Body copy stays small and restrained (16–18px) so headlines do the visual work
- Use lowercase or sentence-case stylization for nav links and micro-labels for a modern feel

Spacing & Layout

- Generous vertical spacing between sections (120–160px on desktop)
- Max content width ~1200px, centered, with comfortable side padding on mobile

- Grid-based logo walls and card grids (2–4 columns depending on section)

3. Site Structure / Pages

- Home (full narrative page — see Section 4 for all blocks)
- Services (overview + individual service pages, grouped into categories)
- Method / Process (dedicated page expanding the step-by-step framework)
- Case Studies (index + individual case study pages, filterable by industry)
- About
- Blog (index + article template)
- Reviews / Testimonials
- Contact
- Free tools / lead magnets (optional interactive utility pages, e.g. a free audit or checker)

4. Homepage — Section by Section

A. Navigation Bar

- Sticky header with logo (left), primary nav links (center/right), and a persistent chat/WhatsApp CTA button (far right)
- Nav items with dropdowns should use a megamenu layout, grouping links into labeled categories (not a plain flat list)
- Include a mobile hamburger menu that expands to a full-screen overlay with the same grouped structure

B. Hero Section

- One bold, short headline (5–8 words) stating the core value proposition
- One supporting sentence (max 25 words) explaining the method/approach
- Below the fold-line: an auto-scrolling logo marquee of client/partner logos (infinite loop, pause on hover)
- A trust stats bar directly under the logos: years in business, projects completed, countries served, review rating

C. Social Proof / Reviews Section

- Horizontally scrolling (marquee or carousel) testimonial cards
- Each card: 5-star rating, 1–3 sentence quote, reviewer photo, name, role/company
- Mix of platforms if available (Google Reviews, Trustindex, etc.) with the source logo shown for credibility

D. Method / Process Section

- Present your process as a named framework with 3–5 clearly labeled phases (e.g. Discover, Diagnose, Design, Deliver, Evolve — adapt names to your business)
- Each phase gets: a number (01, 02...), a punchy one-line hook, and 2–3 short supporting bullets

- Use scroll-linked progress (as the user scrolls, a progress bar/indicator fills in sync with the visible phase)
- Keep the copy provocative and confident — short declarative sentences over long explanations

E. Interactive Engagement Block

- One lightweight interactive element that personalizes the pitch — e.g. a quiz, a diagnostic tool, a friction-mapping selector, or a calculator
- Show a live/animated counter of aggregate usage (e.g. "183+ issues diagnosed") to build momentum and social proof

F. Scrolling Marquee Statement

- A single bold brand statement/manifesto line, repeated in an infinite horizontal marquee, in all caps, as a visual breather between content sections

G. Contact / CTA Section

- Two primary contact paths side by side: "email us" (mailto link) and "message us" (WhatsApp or chat link)
- Keep this section visually simple — big clickable text links, not cluttered forms

H. Footer

- Columns: Popular services, Company (services/case studies/blog/method/about/contact), Quick links (about/reviews/tools/sitemap), Social icons
- Trust elements: payment method icons, awards/badges, copyright + legal links (privacy, terms, cookies)
- Optional language toggle if serving multiple regions

5. Interactions & Motion

- Fade-up + slight translate-Y reveal on scroll for section headings and cards (stagger children by ~80ms)
- Infinite-loop CSS/JS marquee for logo wall and testimonial carousel (pause on hover/touch)
- Animated number counters that count up once the stat enters the viewport
- Sticky/scroll-linked progress indicator for the Method section
- Keep animation durations short (200–500ms) and easing smooth (ease-out) — avoid anything that delays perceived load speed

6. Copywriting Guidelines

- Short, confident, declarative sentences. Avoid corporate filler words.
- Every section headline should be quotable on its own
- Use contrast/tension in copy (e.g. "we don't prescribe software, we prescribe outcomes")
- Support every bold claim with a number, stat, or concrete proof point where possible

7. Responsiveness, Performance & Accessibility

- Mobile-first responsive layout; test at 375px, 768px, 1024px, 1440px breakpoints
- Lazy-load below-the-fold images and testimonial avatars
- Respect prefers-reduced-motion for all animations
- Sufficient color contrast between text and dark backgrounds (WCAG AA minimum)
- Semantic HTML (proper heading hierarchy, nav landmarks, alt text on all images)

8. SEO & Metadata

- Unique title + meta description per page
- Open Graph + Twitter card images for social sharing
- Structured data (JSON-LD) for Organization and Reviews where applicable
- Clean, descriptive URL slugs matching nav structure

How to use this: Paste this entire document into your AI coding tool along with your brand name, colors (if decided), logo, and real content (services, testimonials, case studies). Ask it to scaffold the Next.js project first, then build section by section in the order listed above.
